

PATENT**PENDING CLAIMS AS AMENDED**

Please amend the claims as follows:

1 - 19. (Canceled)

20. (Previously Presented) An apparatus, comprising:
a processor for generating a list comprising zero or more identifiers, the list associated with a first station, each identifier identifying one of a plurality of second stations for sending a first message to the first station; and
a transmitter for transmitting a second message to the first station, wherein the processor further generates the second message comprising zero or more of the identifiers from the list,
wherein the second message directs the first station to remove an identifier from a list of identifiers stored in the first station.

21. (Original) The apparatus of claim 20, wherein the list is generated in accordance with one or more predetermined criteria.

22. (Original) The apparatus of claim 20, further comprising a receiver for receiving a measurement of a second station, wherein the processor includes an identifier associated with the second station in the list in accordance with the received measurement and in accordance with one or more predetermined criteria.

23. (Canceled)

24. (Previously Presented) The apparatus of claim 20, wherein the second message identifies a list of identifiers for storing in the first station.

PATENT

25. (Previously Presented) An apparatus, comprising:

a processor for generating a list comprising zero or more identifiers, the list associated with a first station, each identifier identifying one of a plurality of second stations for sending a first message to the first station;

a transmitter for transmitting a second message to the first station, wherein the processor further generates the second message comprising zero or more of the identifiers from the list, wherein the second message directs the first station to add an identifier to a list of identifiers stored in the first station.

26. (Canceled)

27. (Canceled)

28 - 45. (Canceled)

46. (Previously Presented) A method for monitoring messages, comprising:

generating a list comprising zero or more identifiers, the list associated with a first station, each identifier identifying one of a plurality of second stations for sending a first message to the first station; and

transmitting a second message to the first station, the second message comprising zero or more of the identifiers from the list,

wherein the second message directs the first station to remove an identifier from a list of identifiers stored in the first station.

47. (Canceled)

48. (Previously Presented) The method of claim 46, further comprising storing the list of identifiers from the second message in the first station.

PATENT

49. (Previously Presented) A method for monitoring messages, comprising:
generating a list comprising zero or more identifiers, the list associated with a first station, each identifier identifying one of a plurality of second stations for sending a first message to the first station; and
transmitting a second message to the first station, the second message comprising zero or more of the identifiers from the list, wherein the second message directs the first station to add an identifier to a list of identifiers stored in the first station.
